Installing Apps using the Company Portal

The Intune Company Portal is a Windows application on each device which allows the end user to install optional software. Company Portal access to install applications is granted to the following users:

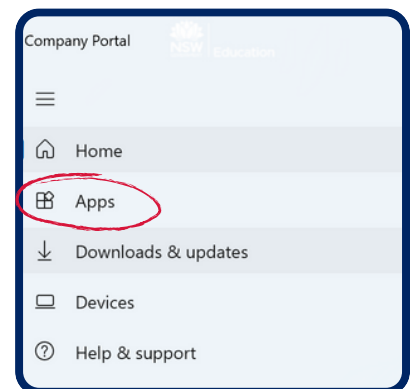

- The assigned Primary User of the device.
- Any user of a device if there is no Primary User of the device.

To install an application using Company Portal:

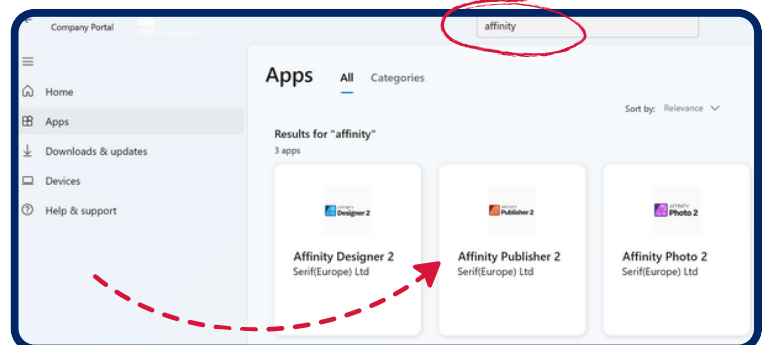

- Log on to the device and click the Start button.
- Type in Company Portal and select the Company Portal app.

- In the top left hand corner of the window, click Apps.

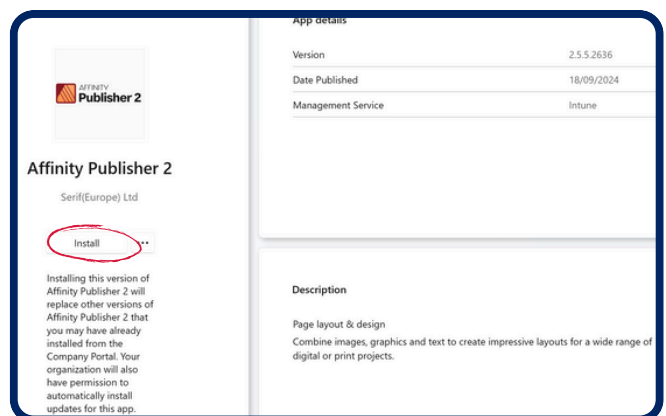

- Scroll through the list of apps, or use the search bar to find the app you wish to install.

- Click on the app you wish to install.

- Click Install to begin downloading the app and the installation process.

- After a short period of time, the app will be installed and ready to use.
